

HTC Androids Get PowerSkins

Written by Marco Attard

PowerSkin releases charging cases for two HTC Android smartphones-- the Inspire 4G and Desire HD.

The black silicone skins not only act as a protective case but also provide up to twice the power in addition to the device's battery (or so the company claims, at any rate), while the design allows access for ports and camera.

The case battery's power capacity is 1500mAH, which PowerSkin says allows for 260 mins of talk time (or 120 hrs of standby time).

It charges through either wall socket or USB cable, and its smart technology should first charge the phone itself first.

PowerSkin has cases for a number of other smartphones available-- including Samsung and Motorola devices, as well as the (now obligatory) iPhone 4.
