

Samsung Intros Galaxy Ace 3

Written by Marco Attard
14. June 2013

Another day, another Samsung device announcement-- welcome the Galaxy Ace 3, a more humble smartphone proposition for the customer with a somewhat tighter budget.

Sitting beneath the [recently announced Galaxy S4 mini](#) in the Samsung mobile hierarchy, the Ace 3 is an Android 4.2 device with a 4-inch display. It carries either 1GHz (3G) or 1.2GHz (LTE) dual-core processor, 4/8GB storage (expandable via microSD) and a 5MP rear-facing camera.

Also included is the usual selection of Samsung software, such as S Translator, S Voice and Smart Stay.

Samsung omits to mention when the Galaxy Ace 3 ships, but once that starts it will be available in either 3G or LTE variants.
