

NuVo iOS App Adds Streaming

Written by Marco Attard
28. March 2014

NuVo adds a new feature to version 1.8.1 of its iOS Player Portfolio App-- the streaming of content stored on any iDevice running iOS 6 or later directly to the NuVo system.

Audio files stored on the iDevice are accessible provided both device and NuVo Player Portfolio system are on the same network. Once connected, each iPhone or iPad becomes an audio source available as a library within the app.

The system handles up to 16 simultaneous streams, and the app provides play/pause, next song/last song and shuffle controls.

As well as the iOS app update users also need to install the latest Player Portfolio firmware (version 1.8.1). When opened the updated app prompts users to complete the system update and provides a brief Direct Stream tutorial.
