

Cortado Corporate Server Now Handles iDevices

Written by Marco Attard
14. October 2011

Cortado updates Corporate Server to version 5.3-- now delivering Apple device management without the need for an Apple Enterprise Developer Program contract.

Cortado Corporate Server integrates smartphones and tablets into existing enterprise IT infrastructure, delivering cloud desktop services for mobile device using employees-- including file and database access and management, PDF and ZIP creation, printing and faxing.

It also integrates completely with Microsoft Active Directory, providing easy access rights management to drives, printers and databases.
