An IPsec Client for Androids

Written by Marco Attard
04. May 2012

NCP releases a preview of NCP Secure VPN Client for Android 4.0 (aka Ice Cream Sandwich)--the first 3rd party IPsec client customers one can download and install on-the-fly.

Like Secure VPN Client on PCs, the Android version is compatible with IPsec gateways from various vendors, including Cisco, Juniper, LANCOM, Teldat (formerly Funkwerk/Bintec), Sonic Wall and Microsoft Server 2008 R2.

It supports all communication and security standards-- IKEv1/2, PKCS#12 certificate support, IKE config mode and XAUTH.

The preview is available now as a free download from Google Play.
