

Microsoft Virtualisation on Androids

Written by Marco Attard
11. May 2012

Following the February 2012 launch of the iPad version, the CloudOn app arrives on Android devices with Box, Dropbox and Google Drive integration.

CloudOn is a free app allowing users to open, edit, share and store Microsoft Office and Adobe files. It runs on the cloud, using tablets simply as a display.

Built-in Adobe Reader and File Viewer mean the app handles large range of file formats, including .pdf, .jpg, .png, .gif and raw Photoshop images.

The Android version requires Android 3.1 or later, and is available for free on the Google Play app market.
