28. August 2015

LG previews a tablet offering set to make an IFA 2015 appearance-- the G Pad II 10.1, a 10-.1-inch Android tablet featuring a 1920x1200 resolution display and a 2.26GHz Qualcomm Snapdragon 800 CPU.

Further specifications include 2GB RAM, 16GB internal storage (expandable via microSD slot), 5MP rear-/2MP front-facing cameras and a 7400mAH battery, all inside "soft metallic finish" casing. Connectivity comes through wifi and LTE.

Other LG additions include a Reader Mode (reduces blue light from the display backlight for more comfortable reading), Dual Window (a multitasking mode splitting the screen in 2), Microsoft Office for Android Tablet and 2 years of free OneDrive cloud storage.

The G Pad II 10.1 should hit European markets after IFA 2015.
