ZTE is no stranger to [Android-powered projectors](#) , but its latest takes an even bigger form factor-- featuring an 8.4-inch AMOLED touchscreen, the Spro Plus is essentially a tablet grafted on top of a projector.

Announced at MWC 2016, the Spro Plus combines a 500 lumen projector with a Snapdragon 801 CPU, 3GB RAM, 128GB storage (expandable via SDXC card) and 12100mAh battery. Connectivity comes through wifi, Bluetooth and optional LTE. As such, one can easily describe it as a chunky mid-range tablet able to beam 80-inch images on walls or screens.

The device also promises decent audio output via a pair of 4W JBL Audio speakers, and it can find videoconferencing applications through built-in Harman sub-miniature microphones.

The Spro Plus should be available from Q3 2016.
