The HTC Flyer is the next in a whole series of Android tablets at Mobile World Congress 2011-- one with a 7" touchscreen and HTC Sense technology.

Under the hood is a 1.5GHz processor and 32GB worth of storage space (expandable via microSD). It carries the standard 2 cameras (1.3MP front and 5MP back), a number of sensors (ambient light, g-sensor and compass), micro-USB port and HSPA+ connectivity.

The Flyer does have 2 tricks up its sleeve-- a pen stylus with "Scribe" technology allowing for handwriting recognition, SRS surround sound and OnLive integration (the cloud-based gaming service whose company HTC purchased recently).

It should be available sometime "early 2011".

Go HTC Flyer
