Asus shows its tablet computer selection at CeBIT-- 4 models in total, 2 of which come with keyboards.

The Eee Pad Slider features a 10.1" IPS touchscreen, together with a slide-out keyboard, turning it into something like a notebook computer. It carries a dual-core NVidia Tegra 2 CPU, together with a GeForce GPU, front and rear facing cameras and Android Honeycomb as oS. Internet connections come through either wifi or (optional) 3G.

Meanwhile the EePad Transformer is a 10.1" touchscreen tablet carrying the same specs as the Slider, only one that turns into a notebook via docking station with integrated keyboard. The dock also extends the device's battery life to up to 16 hours. The tablet itself has a mini-HDMI port for easy external display connection, with HD video playback support.

In a small form factor is the Eee Pad MeMO, with a 7.1" capacitive touchscreen. For heavier-duty applications is the Eee Slate EP121, carrying an Intel Core i5 dual-core processor and a 12.1" LED-backlit display. It has Windows 7 Home Premium as OS, ensuring full compatibility with a wide application range. It comes with either 32 or 64GB of storage space, up to 4GB of DDR3 RAM, x2 USB 2.0 ports and a mini-HDMI port.
