Seagate announces its GoFlex Satellite, its first wireless storage device connecting to any wifi-enabled device, including mobile phones and tablets.

It connects to devices over wifi 802.11 b/g/n via either web browser or GoFlex Media app (available for iDevices) and also includes a USB 3.0 port.

Seagate says it has up to 5 hours of battery life, with 25 hours' worth of standby time.

The GoFlex Satellite will be available this summer, with 500GB storage capacity.
