

Charging Via Cigarette Lighter Socket

Written by Marco Attard

Your customers will probably like the idea behind the Just Mobile Highway Pro-- a small cylindrical device turning the cigarette lighter socket into x2 USB charging ports.

The USB charging ports handle different outputs (1A and 2.1A), while the device comes complete with a fuse for surge protection. A green micro-LED lets one know when the Highway Pro is in operation.

It comes in two varieties-- Pro (shipping with a cable for iDevices) and non-Pro (with x2 regular USB ports).
