

Mobile TV, on the iPad

Munich-based Equinox has a solution for customers wanting to watch TV programs on their iPads-- the Tizi Go, a dongle turning the iPad into a mobile DVB-TV solution.

The Tizi Go is a follow-up on the Tizi, a wifi-based TV transmitter. Connecting to the iPad dock connector, it not only receives DVB-TV signals but also allows users to pause, record and rewind live TV via tizi.tv app.

Users can transfer recordings to iTunes, while app's electronic program schedule does not require an internet connection. Equinox says the Tizi Go has up to 9 hours of battery life (while viewing TV at 30% brightness in airplane mode) and is rechargeable via included micro-USB cable.
