

Voddler and Dolby Launch Mobile Movie Service

Written by Marco Attard
02. March 2012

Voddler and Dolby Laboratories implement Dolby Digital Plus audio in the latest mobile version of the Voddler video-on-demand (VOD) service.

Launched at Mobile World Congress on select Nokia smartphones (N9, 700, 701, 603, 803, and the upcoming 803) the Voddler app streams full movie with "true" 5.1 Dolby-powered surround sound.

The Voddler online library offers movies and TV series from 35 studios for customers in Sweden, Norway, Denmark and Finland, with the option to either purchase, rent or purchase titles.
