

First Multi-Party TV-Quality Video Conferencing on Smart Phones and Tablets

Written by Bob Snyder
21. December 2010

A 1.5 billion euro telecommunications provider in the Nordic countries, with 2 million consumers regionally and around 150,000 corporate customers and public administrations internationally, **Elisa says its multiparty videoconferencing solution for tablets and smartphones is the first of its kind in the world.**

Based on technology developed by Vidyo, Elisa's Android application enables their corporate customers to participate in telepresence video conferences via smartphones and tablet computers.

In addition to calls between two parties, the new application also allows for multiparty video conferencing meetings between several participants using PCs, room systems or smartphones and tablet computers.

As of 1st December 2010, this video conferencing application is available for the Galaxy Tab and the Galaxy S by Samsung, and the application is compatible with WLAN and Elisa's 3G and 4G networks.
