

Multi-Party Video Conferencing Through any Device

Written by Marco Attard
25. February 2011

Fuze Box demonstrates its Presence video conferencing technology at Mobile World Congress 2011-- shown off on Motorola's Xoom tablet.

Presence allow online meetings from any device-- from Android tablets to laptops, desktops and iDevices (with iPad users logging in and watching the meeting's live video screen). Users can start meeting from either web browser or Fuze app.

The technology includes VoIP, screen sharing, content sharing and a set of collaboration tools-- while the company says it delivers 720p video with under 200ms for 8 conference participants.
