

Mobile Devices Get 360-Degree Video

Written by Marco Attard

Kogeto shows off the Dot 360-degree panoramic video recording accessory for iOS and Android devices (and the GoPro camera) at CES 2012.

The idea behind the dot is fairly simple-- users need to install the Kogeto Looker app before attaching the holster-like Dot to their smartphone of choice. The app allows the automatic recording of 360-degree panoramic video for users to either edit or upload to the web.

The Dot is already available for the iPhone 4/4S, and an update should hit the market post-CES for iPhones and Android phones (under the name "iCONIC for Android"), as well as GoPro Hero cameras.
