

Soundmatters shrinks down its portable flat Bluetooth speaker range even further with the Dash7, the smallest (by around 40%) speaker from the company to date.

Described not as a speaker but a "soundbar," the Dash7 delivers output of up to 90dB via combination tweeters/woofers (or "twoofers") armed with flat neodymium drivers pushing a "uniquely wide" frequency range.

Interestingly the battery not only promises up to 10 hours of playback (20 if amplifying music through 3.5mm aux in) but also doubles as a passive bass woofer. Customers wanting to augment audio even further can combine the Dash7 with the foxLO portable subwoofer.

A built-in noise cancelling microphone adds speakerphone capability complete with on-speaker call-control buttons.

The Dash7 is available now in red, white and black.
