Griffin announces the WatchStand Powered Charging Station-- a combination iDevice dock handling Apple Watch charging with room for either an iPhone or iPad.

Essentially an update of the original WatchStand dock, the charging station features a built-in power supply and 2 dedicated USB charging ports. The underside handles cable management, ensuring no messy cords when Watch and iPhone are on the stand.

The dock supports all Watch bands and adapts to both horizontal and vertical positions. The base lets users put the iPhone either on top of a flat felt surface or angled against the piece holding the Watch, allowing one to watch videos while the smartphone charges.

The WatchStand Powered Charging Station is available now.
