

Belkin announces a wireless charging solution for owners of the latest iDevices-- the BoostUp Wireless Charging Dock, a charger compatible the recently launched iPhone XS models and all Apple Watches.

The BoostUp dock should provide a worthy alternative to the still unavailable Apple AirPower charger. It offers 7.5W of Qi-certified wireless power for all compatible phones, and handles the simultaneous wireless charging of an iPhone and Watch. In addition, a USB-A port can power up a 3rd device. Powering the actual dock is an included 45W AC adapter.

“We designed and engineered new BoostUp Wireless Charging Dock from the ground up to be the most elegant and most powerful home for your iPhone and Apple Watch,” the company says. “On the inside, we packed our latest intelligent wireless charging systems. It’s a great example of how the Belkin design teams think of technology as an extension to our lifestyle that should enhance our environment as much as it makes life with our mobile devices more enjoyable. We could not be more excited to bring this beautiful piece of technology to your home.”

For customers preferring to charge their devices via cable Belkin also offers an update on the PowerHouse Charge Dock-- a version adding a red-coloured dial to raise and lower the Lightning connector. It is compatible with all iPhone models with Lightning connectors, as well as the Watch.

The BoostUp Wireless Charging Dock is available from December 2018, while the PowerHouse dock hits the market from November.
