

"Mobile Lens System" maker Olloclip announces a range of products, including one-piece clips and protective cases, for use with the iPhone 11, Pro and Pro Max, together with the Samsung S10 and S10e.

"With the arrival of the iPhone 11 series and Samsung's new S series, Olloclip is proud to continue innovating exciting solutions for mobile photographers who just want to shoot on their phones," the company says. "Olloclip's unique unibody clips make attachment to the phone a breeze, and our precise engineering ensures that whatever lens is being used fits perfectly every time."

The clip system snaps on top of the smartphone, even if it is inside a case. Compatible lenses snap on the clip over the built-in camera module, creating an interchangeable lens system for mobile photography. Additions to the lens system include the Macro 10X Essential, Pocket Telephoto 2X Essential and a Stability Kit update complete with Bluetooth shutter release, "super-light" tripod and pivot grip stabiliser.

Olloclip lenses are usable with any clip, and to complete the transition the company will also roll out an iPhone 8/7 and 8Plus/7Plus clip on December 2019.
