

Logitech announces the Powered 3-in-1 Dock-- a "beautifully crafted and meticulously engineered" dock able to simultaneously charge an iPhone, Apple Watch and AirPods.

The compact dock is Qi-certified and supports 7.5W fast charging for wireless devices, and carries internal heat sensors and an automatic temperature-management guard against overheating. In addition, Logitech says it works with most cases 3mm or thinner. The dock holds the iPhone upright, allowing customers to use the phone while charging.

Also launched by the company is a pair of single-device wireless chargers-- the Powered Stand and Charging Pad. The Stand is designed for use with the iPhone, and holds the smartphone upright for use. Meanwhile the Pad is a self-descriptive means of powering up an iDevice via wireless charging.

The above mentioned Logitech wireless chargers are available now. The 3-in-1 Dock and Stand ship in graphite and white, while the Pad comes in graphite, white, lilac and blue sage.
