

A USB-C AirPods Charger

Written by Marco Attard
20. April 2020

Accessory maker Satechi announces a USB-C addition to the official AirPods charging case--the self-descriptive USB-C Wireless Charging Dock for AirPods, a device customers can plug directly into a MacBook, iPad Pro or any USB-C device.

Available in white, the simple charging solution is just large enough to hold an AirPods case on top. It does not connect to power outlets via a plug, and instead sips power from any compatible device through a larger USB-C port. As such it makes for a compact and cable-free means to power up the wireless earbuds, although one has to keep in mind something is sticking out of their tablet or laptop.

Satechi says the wireless charging dock for AirPods ships on May 2020.
