

The Backup Batteries with a Backup

Written by Marco Attard

Your customers might find backup batteries useful (if not essential), but even the best backups might fail in an emergency. Enter EtonC, whose BoostTurbine backup batteries come with an additional hand-powered backup.

The BoostTurbine USB batteries have a hand crank (or "hand turbine power generator") allowing users to generate extra juice. According to the company 1 minute on the hand crank produces enough power for a few text messages or a 30-second phone call.

BoostTurbine batteries come in two models-- the BoostTurbine 1000 (provides around 50% of the standard smartphone charge) and 2000 (provides a full charge). Both aluminium construction and US/microUSB ports, allowing for use with most iOS and Android devices.
